

MULCHES

Midnight Mulch™ provides a beautiful and striking contrast to the rich colors of plants and flowers. Midnight Mulch™ is a black blend of aged and shredded hardwoods, leaf compost and charcoal particles. The hardwood content provides moisture and weed control, while the leaf compost adds a range of nutrients to sustain plant growth and beauty. Additionally, the charcoal allows for more efficient percolation of water to plant roots.

Autumn Red Mulch™ is a decorative wood mulch with a deep terra-cotta color that lasts longer, and provides weed and moisture control.

Hardwood Mulch is a rich, dark brown mulch which provides weed and moisture control. Composed of a premium grade, finely shredded blend of oak, ash, maple and other naturally aged hardwoods, Hardwood Mulch is a basic, multi-purpose mulch suitable for both evergreens and deciduous plants.

Pine Bark Mulch has a distinct, shredded appearance and natural red color. Pine Bark Mulch is particularly suitable for acid-loving plants such as roses, azaleas, and rhododendrons.

Playsoft Playground Mulch™ is nationally certified for use in playgrounds. Playsoft is made from a variety of natural-color hardwoods. Playsoft Playground Mulch™ also serves as excellent covering for walking paths and trails. For safety reasons, we recommend an installation minimum of six inches deep.

Chocolate Chip Mulch™ is a decorative wood mulch with a rich chocolate brown color that lasts longer, and provides weed and moisture control.

SOIL & SOIL CONDITIONERS

Tip Top Soil™ is a rich blend of finely screened topsoil and compost. The mixture creates top soil with a "boost" that is ideal for the transplanting of shrubs and trees, filling in those hard-to-grow areas, and creating seed beds for lawns.

Ultra Soil™ is a blend of finely screened topsoil, compost, and Pine Bark Fines. Ultra Soil™ is ideal for planting, and creating raised beds.

No Soil Planting Mix is a slightly acidic mix of aged and finely ground pine bark and year old leaf compost. It is lightweight and ideal for use in roof gardens and containers.

Gourmet Compost™ is a mixture of naturally composted organic material, blended and aged to make a balanced soil amendment. You should till Gourmet Compost™ into your existing soil.

Pine Bark Fines are excellent for acid-loving plants such as azaleas, roses, and rhododendrons. We recommend that you condition the soil with Pine Bark Fines, which are screened and aged into a manageable soil conditioner. Pine Bark Fines are best tilled into the existing soil.

Prices effective January 2011 and are subject to change.
